Australia was stupid to give all our LNG away without a reserve amount for Australia. The deal was ok but should never have been given without an Australian Reserve for domestic use. Now we are having to fight against our aquifers being poisonous from all types of fracking. I'm rural with a commercial crop sold in Australia. Bore water will always be our drinking water and survival living rural. Not to mention poisoned produce from using bore water where fracking has been applied in the aquifer. And to top it off it costs too much to apply and get a dividend on what it produces. Really have a good look in the US of A. It's proven bad and not economically sound. Just to destroy an aquifer. Please don't let anyone frack. Greg Reilly.
