

## INTRODUCTION:

*Good morning ladies and Gentlemen, I'm so proud for being with you as environment team member and I will per tribute my initial respect to the first people of the land, the Aboriginal/Torres Straights Islanders, the past, present and future generation to come.*

*I have honour your kind supports and appreciate your time for being here and I thank the NT Government, their ministerial councils, colleagues and the community members for their inputs, Commitments, efforts and the ongoing supports they have been providing to the Territorian over The past years.*

## Subjection:

*I have come before you this morning to contribute some specific vital ideas which are deemed necessary to shed light on and especially (the climate Change issues) most of my topics will relatively have biological influence and evidences such as culture/tradition which comprised the values and understanding of environment management, as Native dedicated young man I was privileged to acquire high standards level of knowledge in environmental management and a couple year when after I come to Australia, I did a personal survey in relation to climate change issues which has become a global concerns that effecting our business, environments , domestic habitats, farming and waters industries were all polluted cause of missing the cultural/traditional practices.*

*My past experiences and professional quality knowledge evolved on biological practices in which I have combined with today modern science and it's has helped me a lot to well identified how we can minimized the risks of the current situation, my answer to those impacts we were experiencing Over decades is, ( Yes we caused it and collectively with positive minds we can minimise it and we can fix it)*

## What comprised environmental :

*Lands, Plants, Mounts, hills, oceans ,Humans, animals or generally every species surrounding us and we called it in other term the universe right, did we keep the nurturing values of those plants, herbs, lands? And the answer is no cause we rather focused on today technology than keeping the core values, benefits and the opportunities our Ancestors left behind us, and we all have well understood that only human mismanagement of those natural resources led mind kinds into chaos as we lost the ideas of preserved the traditional/cultural knowledge or*

*practices and no one would denied it. As native young man I have massive supports I can provide to NT Government as I have understood the situations.*

### **Is There any Solution?**

*Yes, and how?*

*First of all I like invit the Aboriginal and Torres Straight Islanders rangers to work with us hand to hand to create this successful future for the generation to come*

*I would like to introduce the NT Government some specific biological strategy plans that we can implement to minimized the challenges of the current situation, there are norms of plants that were destroyed due to constructions and developments and some those plants import rains at its seasonable time frames, produce nature energy to the environments, save us from huge air polllution that causing by giant mining activities and also produce more than twenty non-food and food items.*

*As Darwin situated at tropical Zone, there must a solution to protect the environmets sugc as our farming lands, wild beas,domestic business from the disaster of this hot humidity, as we comsuming the system and we do not have any other cultural alternative way we can preserve the values of what we eat, how can we build a save environment for future generation to come.*

*The three I would like to introduce is called Palm nut three, and what palm three does? We will discovered later as we keep searching for the solution, is a three that its biological meaning from Ancient time and it stil having the same values if you been told how effectively it really work, its farm platations produces natural energy and sustain seasons adquatly that help farmers to grow the crops, it oil generate electricity from the Ancient and it has been used for other food and non food purposes.*

### **Illustration and evidences:**

Take a propers look of Darwin from the above, Histories, climate in two hundred years ago, we have lost so must in term of agriculture, hoticulture, farming, and ect.

### **Comment and Conclusion.**

I would like to get the puplic attention towards my observation and idears and we can see where to start.

Finish with same Ancestors presentation.
