INSPECTION_COMMENT

Well has been disconnected from line, shut-in, tank has overrun at some time, no tag.
Well has been disconnected from line, shut-in, tank has overrun at some time, no tag.

Site restored, E/S viols, no dike
Site restored, E/S viols, no dike

Site restored, E/S issues, no well tag
Site restored, E/S issues on road
site restored, E/S issues on road
Site restored, E/S issues, no dike
Site ID sign in place. E&S plan on site. Well not equipped for production (well head only on site).
Silt fence installed along down-slope side of site adequately maintained. Pit appears sound and had adequate freeboard
Site is stabilized with rock. No signs of accelerated erosion on site. Access road ok.
Inspection revealed the following deficiencies:

1) Failure to obtain ESCGP-1 permit. When the total amount of earth disturbance activity results in 5 acres or greater of substantially connected earth disturbance at one time or 5 or more acres of earth will be disturbed over the life of the project the operator must obtain an ESCGP-1 approval before conducting any earth disturbance activities. The total disturbance for your project was approx. 15.08 acres. In addittion to the ESCGP-1 permit that needs to be submitted and approved for the Auen well project as stated above, the culvert installed on the access road to this site requires rip-rap at the outlet to minimize erosion. Please address this concern and contact me.

abandoned by failure to submit production

any and all abandoned wells on BWJ-5-R not registered and not produced. All wells on this lease are not being produced or are abandoned by not submitting production reports, and failer to submit all MIA reports required.

No inspections since 3/5/09. No longer NWRO county.

New NOV entered by NCRO on 1/22/10 supercedes this violation and associated NOV.

MB insp found multiple 102.4 viols, as well as potential for 78.56(4)(ii) problem in that pit was excavated with 90 degree sides, insp inadvertently not input until 3rd page NOV routed through MBC. MBC 08/27/2009
MB insp found multiple 102.4 viols, as well as potential for 78.56(4)(ii) problem in that pit was excavated with 90 degree sides, insp inadvertently not input until 3rd page NOV routed through MBC. MBC 08/27/2009
Site being prepared with no E&S plan on site, no E&S control BMPs in place, and no sign with poermit/operator info
Well permit/Operator Information not posted, E&S plan inadequate, impoundment had hole in liner and was not constructed to regulation, E&S BMPs inadequate, discharging drill water (fresh water and sediment) to ground
Well permit/Operator Information not posted, E&S plan inadequate, impoundment had hole in liner and was not constructed to regulation, E&S BMPs inadequate, discharging drill water (fresh water and sediment) to ground
No site sign, E&S plan inadequate, BMPs not installed correctly, pit not constructed per regulations, fluid overflowing out of pit onto ground (Clean Streams Law and Freeboard violation) sw-closed via IR 2006130
E&S Plan inadequate, failed to minimize erosion, no well/operator sign, pit liner pieces buried in place
E&S Plan inadequate, lacking E&S BMPS, Stream Crossing without permit, no site sign, pit has tears, etc, discharge of drilling fluid to ground.
E&S Plan inadequate, lacking E&S BMPS, Stream Crossing without permit, no site sign, pit has tears, etc, discharge of drilling fluid to ground.
E&S Plan inadequate, lacking E&S BMPS, Stream Crossing without permit, no site sign, pit has tears, etc, discharge of drilling fluid to ground.
E&S Plan inadequate, lacking E&S BMPS, Stream Crossing without permit, no site sign, pit has tears, etc, discharge of drilling fluid to ground.
inadequate tank diking, sent 3rd page NOV
E&S Plan and Controls Inadequate, No Operator/Permit Sign Posted, Encroachments without waivers/permits, Pit Situated below Seasonal High Water Table, NOV issued

On 4/29/2015, I performed an inspection of Alpha Shale Resources Alpha Unit 2 well pad site with Bryon Miller (DEP). I met with Chase Brown and Jamie Davis from Rice Energy. The site is located in JacksonTwp., Greene County. The inspection was performed as a routine inspection of site during reclamation of the flow back pit on site. Met with Chase Brown, waste manager for Rice Energy.

Operator is reclaiming impoundment on site, and was operating the impoundment as a centralized waste impoundment without permit. The operator was also processing waste from the impoundment for disposal without permit.

On December 18, 2015, I conducted an administrative review of the ESCGP-2 Submission received by the Department on December 9, 2015. Within the narrative, and supported by the as-built/design plan overlay drawing, Alpha did not build the site in accordance with its approved ESCGP (ESX10-059-0053). Specifically, Alpha constructed a wider access road to the well site, and an impoundment staging area. These are violations of 25 Pa. Code § 102.5(c) and (m)(4) and 78.53 for failing to comply with the terms of the Alpha Unit 2 ESCGP and by failing to obtain an Erosion and Sediment Control General Permit prior to changing the scope of earth disturbance associated with the Well Site.

In addition, the ESCGP-1 was issued on August 13, 2010, and expired August 12, 2015. Alpha did not submit a renewal or Notice of Termination prior to the permit expiring. This is a violation of 25 Pa. Code § 102.7.

On December 18, 2015, I conducted an administrative review of the ESCGP-2 Submission received by the Department on December 9, 2015. Within the narrative, and supported by the as-built/design plan overlay drawing, Alpha did not build the site in accordance with its approved ESCGP (ESX10-059-0053). The Department conducted an inspection of the Alpha Unit 2 8H on March 8, 2016. The well is properly identified and is equipped for production.

The Department completed a review of the 8H well record. The Department has determined after review of the 8H well record, that the surface casing (20-inch) set depth does not meet the regulations specified in 25 Pa. Code § 78.83(c). The well record formation report details that three freshwater zones were identified on the pad. According to the well record freshwater was encounter at 38ft, 115ft, and 130ft (drillers log). The 24-inch borehole was drilled to 188ft and the 20-inch casing was set at 168ft and cemented. The completed 20-inch surface casing set depth is only 38ft below the deepest identified freshwater zone, instead of the required minimum of 50ft as specified by 25 Pa. Code § 78.83(c).

The Department conducted an inspection of the Alpha Unit 2 8H on March 8, 2016. The well is properly identified and is equipped for production.

On 11/23/2014 APC reported a fish kill in a wetland/pond triburary to Texas Creek due to the discharge of elevated pH water from wet concrete in the excavation. Violations Noted. NOV response recvd 12/22/2014.
On 11/23/2014 APC reported a fish kill in a wetland/pond triburary to Texas Creek due to the discharge of elevated pH water from wet concrete in the excavation. Violations Noted. NOV response recvd 12/22/2014.
On 11/22/2014 Mark Barbier (Anadarko) reported approximately 20 barrels of produced fluid and associated production gas was discharged (uncontrolled to the atmosphere) from the 4H well due to a pipe joint failure on the wellhead. According to the call, the well was shut in manually by Anadarko personnel.
On 11/23/2014, Anadarko excavated impacted pad material and adjacent soils and covered them in plastic. Confirmation samples were also collected.
On 11/25/2014, I arrived onsite and found the excavation several inches deep from the well heads north off the well pad. Impacted soils were contained under plastic. Water ponded in the excavation had conductivity between 4,560 umhos/cm-6,420 umhos/cm. Based on the conductance, I collected a 0942 metals sample within the excavation (3440209). Violations Noted.
ACT 2 report approved by ECB on 3/27/2015. Case Closed.
On 11/22/2014 Mark Barbier (Anadarko) reported approximately 20 barrels of produced fluid and associated production gas was discharged (uncontrolled to the atmosphere) from the 4H well due to a pipe joint failure on the wellhead. According to the call, the well was shut in manually by Anadarko personnel.

pipeline construction activity. This area is now restored and reseeded. The pipeline has E&S issues at the following locations:

41deg. 58' 21.3" 75deg. 37' 14.6"-At this location (Sta 98+00 to 100+00) there is an UNT flowing across the pipeline, eroding the soil and mulch/seed away from the right of way. The blanketing covering the area does not have any more straw left in it, and is threadbare. The soil from the area under the blanket is eroing away and leaving the site through the BMPs placed along the edge of the LOD (at location 41deg. 58' 21.5" 75deg. 37' 14"). (Photos 1, 2, and 3)

Down slope from the issue above is where the sediment is leaving the site, through BMPs placed next to outflow of stream channel. (Photo 4.)

There are also issues adjacent to the UNT (In vicinity of Sta 100+00 to 101+00) with poor vegetation growth and lack of good grading. In this area there is the potential for further erosional issues to occur if uniform vegetative growth doesn't get established. (Photos 5 and 6)

If there are any questions, feel free to contact me at (570) 346-5539.

The Department conducted an inspection in relation to discharge that is occurring on the back left corner of the site. The water has a slight dark tint to it and noticeable petroleum product sheen on top. The Department spoke with Rick Jones, comp

At Station ID: 14+00, water is draining from upland area and crosses the ROW. The water becomes sediment-laden and discharges off the ROW. A pipe had been installed to convey water but it does not span the ROW. The water has bypassed the installed controls.

At Station ID: 17+00, the conditions are similar to Station ID: 14+00, however, the water does not drain through the installed pipe at all.

At Station ID: 14+00, water is draining from upland area and crosses the ROW. The water becomes sediment-laden and discharges off the ROW. A pipe had been installed to convey water but it does not span the ROW. The water has bypassed the installed controls.

At Station ID: 17+00, the conditions are similar to Station ID: 14+00, however, the water does not drain through the installed pipe at all.

At Station IDs: 5+00, 14+00, and 17+00. The E & S Controls have been modified and appear to be adequately reducing sediment laden water from leaving the the LOD. Diversion channels had been cut into the lane of travel which has further alleviated runoff from crossing the ROW. However, the runoff has been diverted to the excavated trench.

E & S Controls have been overwhelmed at Station ID: 20+13 and sediment-laden water was actively discharging to the UNT.

Steep slope off Kilmer Hill Rd >2000' long, no temp. stabilization. Off Tip Top Rd, poor vegetative growth.

Inspection conducted on 6/13/13 of the AMS Parks Gathering Line. Inspection conducted of sheet 7 at around 15:30 hrs. It was raining during the inspection. The first photo shows the first water bar located down gradient of Gary Road failing due to improper installation. The second photo is of silt fence located approximately 300' down gradient of the above mentioned water bar. As the photo shows, the silt fence is being overwhelmed primarily in part due to the improper installation of the water bar. The third photo shows a tear in silt fence located in the vicinity of 36 + 00. As the photo shows, sediment laden water is short circuiting and is being released unfiltered. Photo four is the rock construction entrance located on the western side of Gary Road. As the photo shows, the rock voids are filled in with soil and current design is allowing for sediment laden water to freely flow off the ROW and enter a road side ditch as indicated in the last photo.

VIOLS ACO 6/3/2016 (eFACTS records cleanup). RESTR INSP conducted 11/16/14 (2319251) concluded as NOVIO; NOT approved 11/6/14.
