Major revisions, corrections and updates to mapping have been made since publication and available from:

Published and available from;

Auslig Topo-250k data supplied through Land Information Services, Department of Infrastructure, Planning and Environment, Darwin, Northern Territory of Australia.

Minor road - unsealed

Minor road - sealed

Various soils, cracking clay to sandy gravelly where laterite has developed.

Areas of flood plain to gently undulating country with low hills. Moderate to good prospects for obtaining stock water from groundwater sources.

Most streams, creeks and waterholes are bedrock streams that are geologically associated with the underlying rocks and are recharged from rainfall on the landscape.

Variable soils, cracking clay to sandy gravelly where laterite has developed.
